#### 1. FEATURES

The TFT is a color active matrix TFT LCD module using amorphous silicon TFT's (Thin Film Transistors) as an active switching devices. This module is composed of a TFT LCD panel, a driving circuit and a back light system. This TFT LCD has a 10.1 (17:10) inch diagonally measured active display area with WSVGA(1024 x 600 pixel) resolution.

- (1) 10.1 (17:10 diagonal) inch configuration
- (2) One channel LVDS interface
- (3) 262K color by 6 bit R.G.B signal input
- (4) RoHS Compliance
- (5) Projected Capacitive Touch Screen: USB Interface.

#### 2. PHYSICAL SPECIFICATIONS

| Item                | Specifications                     | Unit              | Note |
|---------------------|------------------------------------|-------------------|------|

Note (1) The constant current source is needed for white LED back-light driving. When LCM is operated over 60 deg.C ambient temperature, the  $I_L$  of the LED back-light should be adjusted to 100mA max

There are 6 Groups LED shown as below , Vleda-ledk=19.2V ,Ta=25  $^{\circ}\mathrm{C}$ 

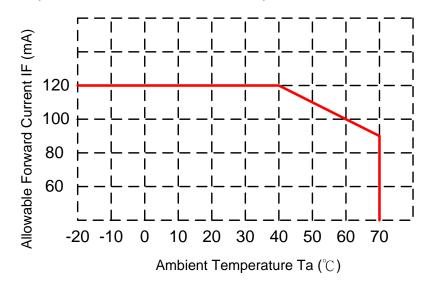

Note2: Condition: Ta=25°C, continuous lighting

Life time is estimated data.

Definitions of failure:

- 1. LCM brightness becomes half of the minimum value.
- 2. LED doesn't light normally.

When LCM is operated over  $40^{\circ}$ C ambient temperature, the IL should be follow :

# **5.2 Measuring Condition**

■ Measuring surrounding : dark room

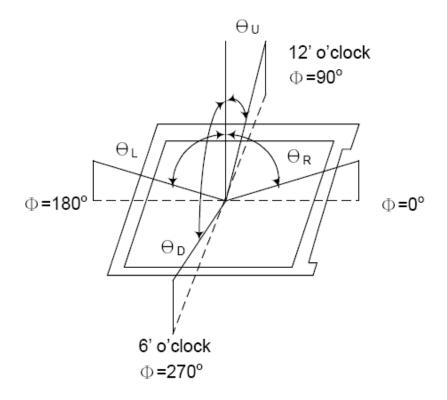

■ Ambient temperature : 25±2°C

■ 15min. warm-up time

#### **5.3 Measuring Equipment**

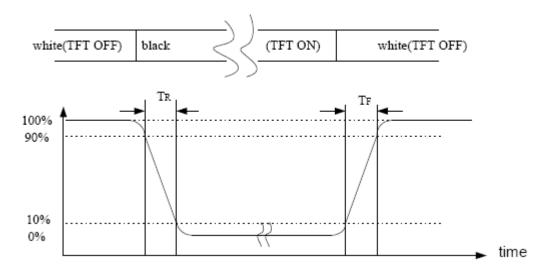

The optical characteristics should be measured in dark room. After 30 minutes operation, the optical properties are measured at the center point of the LCD screen. (Response time is measured by Photo detector TOPCON BM-7 of view : 1° / Height : 120mm.)

Note 1 : Definition of viewing angle range

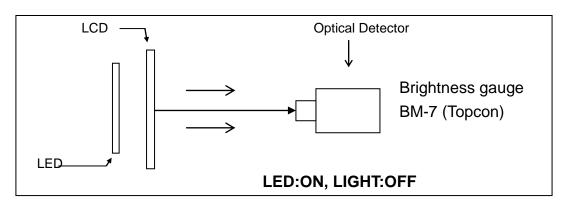

Note 2 : Definition of Contrast Ratio (CR) : measured at the center point of panel

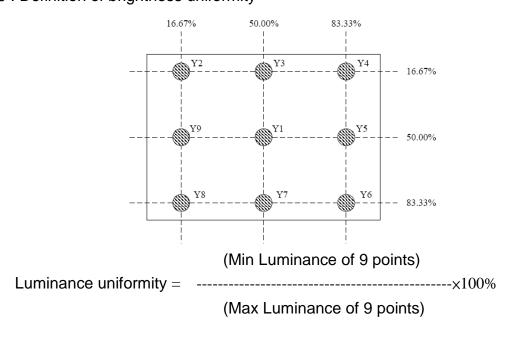

Note 3 : Definition of Response time : Sum of  $T_R$  and T

Note 4: Definition of optical measurement setup

Note 5: Definition of brightness uniformity

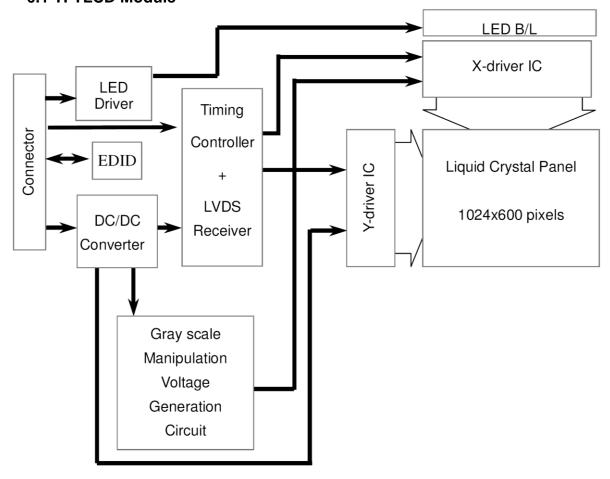

Note 6: Rubbing Direction (The different Rubbing Direction will cause the different optima view direction

Note 7 : Condition: Ta=25  $^{\circ}\text{C}$  , Life time is estimated data.

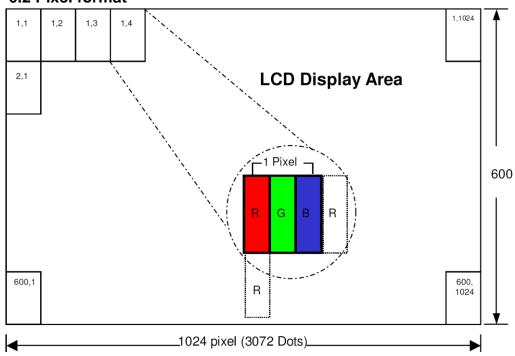

Definitions of failure:

- i. LCM brightness becomes half of the minimum value.
- ii. LED doesn't light normally.

| 24      | VLED      | VLED Power +5V            |       |

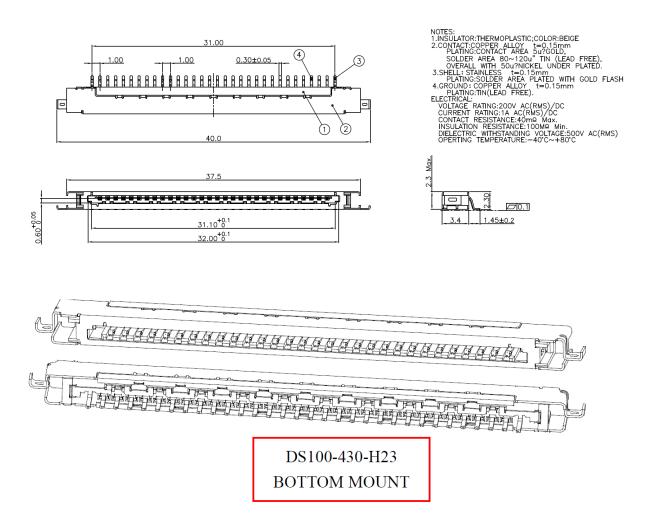

| 25 | VLED | VLED Power +5V |
|----|------|----------------|
| 26 | VLED | VLED Power +5V |
| 27 | NC   | No connection  |
| 28 | NC   | No connection  |
| 29 | NC   | No connection  |
| 30 | NC   | No connection  |

# $Note^*$ : The brightness of LCD panel could be changed by adjusting ADJ

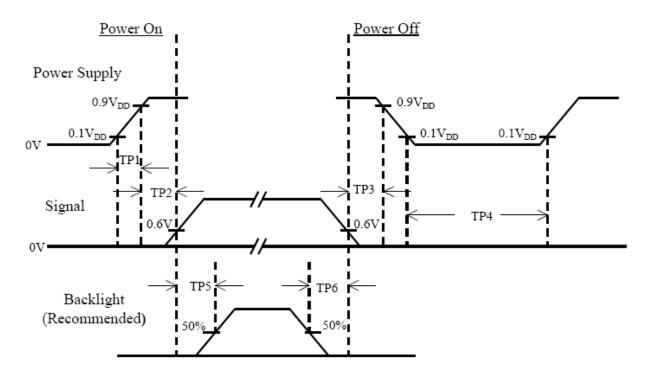

(1) ADJ is PWM signal input. It is for brightness control.

| ITEM                        | SYMBOL | MIN  | TYP | MAX            | UNIT |
|-----------------------------|--------|------|-----|----------------|------|
| ADJ signal frequency        | fрwм   | 5    | -   | 100            | KHz  |
| ADJ signal logic level High | VIH    | 1.2V | 1   | VLED<br>(5.0V) | V    |
| ADJ signal logic level Low  | VIL    | 0    |     | 0.4            | V    |

# (2) LVDS Connector: CSTAR DS100-430-H23

# 8. Power On/Off Sequence

| Item | Min. | Тур. | Max. | Unit | Remark |
|------|------|------|------|------|--------|
| TP1  | 0.5  |      | 10   | msec |        |
| TP2  | 0    |      | 50   | msec |        |
| TP3  | 0    |      | 50   | msec |        |
| TP4  | 500  |      |      | msec |        |
| TP5  | 200  |      |      | msec |        |
| TP6  | 200  |      |      | msec |        |

#### Note:

- (1) The supply voltage of the external system for the module input should be the same as the definition of VDD.
- (2) Apply the lamp voltage within the LCD operation range. When the back-light turns on before the LCD operation or the LCD turns off before the back-light turns off, the display may momentarily become white.
- (3) In case of VDD = off level, please keep the level of input signal on the low or keep a high impedance.
- (4) TP4 should be measured after the module has been fully discharged between power off and on period.
- (5) Interface signal shall not be kept at high impedance when the power is on.

# 9. Projected capacitive-type Touch panel specification

# 9.1 Basic Characteristic

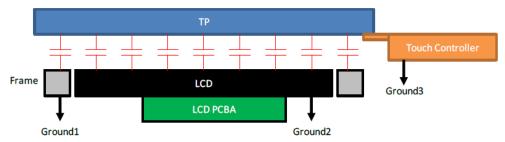

| ITEM                   | SPECIFICATION                     |
|------------------------|-----------------------------------|
| Туре                   | Projective Capacitive Touch Panel |
| Activation             | Two-fingers or Signal-finger      |
| X/Y Position Reporting | Absolute Position                 |
| Touch Force            | No contact pressure required      |
| Calibration            | No need for calibration           |
| Report Rate            | Approx 25 points/sec              |
| Control IC             | <b>EETI EXC7200 +EX5404</b>       |

#### 9.2 Interface

Date: 2019/11/04

| CN6     |        |               |
|---------|--------|---------------|
| Pin No. | Symbol | Function      |
| 1       | VCC    | USB POWER 5V  |
| 2       | DA+    | USB Data+     |
| 3       | DA-    | USB Data-     |
| 4       | NC     | Non Use       |
| 5       | GND    | USB POWER GND |
| 6       | GND    | USB POWER GND |

TP needs to work in environment with stable stray capacitance. In order to minimize the variation in stray capacitance, all conductive mechanical parts must not be floating. Intermittent floating any conductive part around the touch sensor may cause significant stray capacitance change and abnormal touch function. It is recommended to keep all conductive parts having same electrical potential as the GND of the touch controller module.

GND1, GND2 and GND3 should be connected together to have the same ground

10. Reliability Test Items

| Test Item                                | Test Conditions  | Note |
|--|--|------|
| High Temperature Operation               | 70±3°C , t=240 hrs   |      |
| Low Temperature Operation                | -20±3°C , t=240 hrs  |      |
| High Temperature Storage                 | 80±3°C , t=240 hrs   | 1,2  |
| Low Temperature Storage                  | -30±3°C , t=240 hrs  | 1,2  |
| Storage at High Temperature and Humidity | 60°C, 90% RH , 240 hrs   | 1,2  |
| Thermal Shock Test                       | -20°C (30min) ~ 70°C (30min)<br>100 cycles   | 1,2  |
| Vibration Test (Packing)                 | Sweep frequency: 10 ~ 55 ~ 10 Hz/1min Amplitude: 0.75mm Test direction: X.Y.Z/3 axis Duration: 30min/each axis | 2    |

- Note 1: Condensation of water is not permitted on the module.
- Note 2: The module should be inspected after 1 hour storage in normal conditions (15-35°C, 45-65%RH).
- Note 3: The module shouldn't be tested more than one condition, and all the test conditions are independent.

Note 4 : All the reliability tests should be done without protective film on the module. Definitions of life end point:

- Current drain should be smaller than the specific value.
- Function of the module should be maintained.
- Appearance and display quality should not have degraded noticeably.
- Contrast ratio should be greater than 50% of the initial value.

#### 11. HANDLING & CAUTIONS

#### 11.1 Cautions when taking out the module

Pick the pouch only, when taking out module from a shipping package.

#### 11.2 Cautions for handling the module

- 11.2.1 As the electrostatic discharges may break the LCD module, handle the LCD module with care. Peel a protection sheet off from the LCD panel surface as slowly as possible.
- 11.2.2 As the LCD panel and backlight element are made from fragile glass material, impulse and pressure to the LCD module should be avoided.
- 11.2.3 As the surface of the polarizer is very soft and easily scratched, use a soft dry cloth without chemicals for cleaning.
- 11.2.4 Do not pull the interface connector in or out while the LCD module is operating.
- 11.2.5 Put the module display side down on a flat horizontal plane.
- 11.2.6 Handle connectors and cables with care.

#### 11.3 Cautions for the operation

- 11.3.1 When the module is operating, do not lose MCLK, DE signals. If any one of these signals were lost, the LCD panel would be damaged.
- 11.3.2 Obey the supply voltage sequence. If wrong sequence were applied, the module would be damaged.

#### 11 .4 Cautions for the atmosphere

- 11.4.1 Dewdrop atmosphere should be avoided.
- 11.4.2 Do not store and/or operate the LCD module in a high temperature and/or humidity atmosphere. Storage in an electro-conductive polymer-packing pouch and under relatively low temperature atmosphere is recommended.

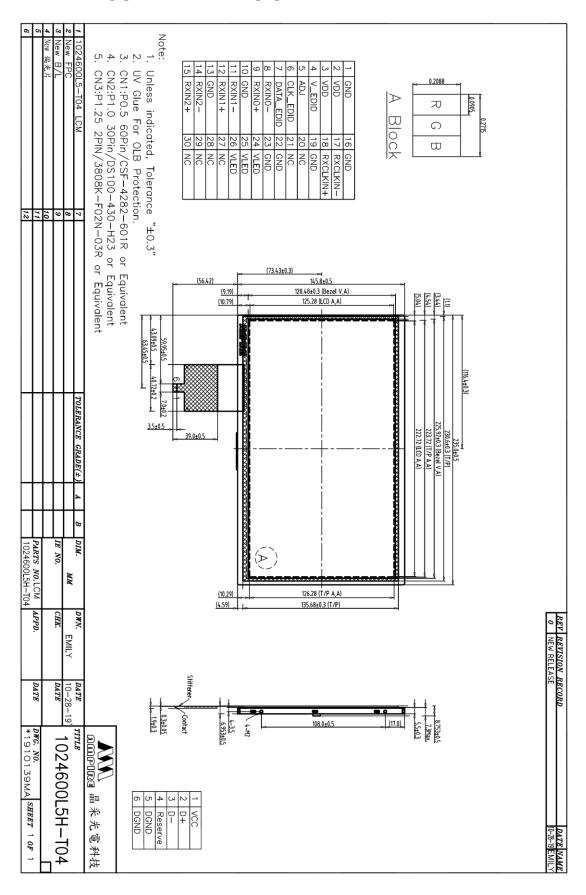

#### 11.5 Cautions for the module characteristics

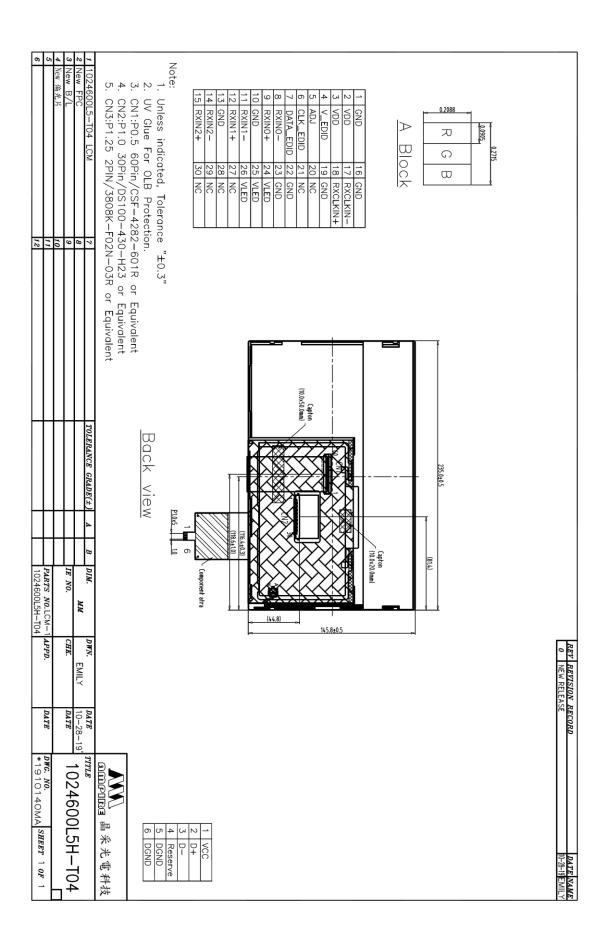

- 11.5.1 Do not apply fixed pattern data signal to the LCD module at product aging.
- 11.5.2 Applying fixed pattern for a long time may cause image sticking.

#### 11.6 Other cautions

- 11.6.1 Do not disassemble and/or re-assemble LCD module.
- 11.6.2 Do not re-adjust variable resistor or switch etc.
- 11.6.3 When returning the module for repair or etc, please pack the module not to be broken. We recommend using the original shipping packages.
- 11.6.4 AMIPRE will provide one year warrantee for all products and three months warrantee for all repairing products.
- 11.6.5 Do not keep the LCD at the same display pattern continually. The residual image will happen and it will damage the LCD. Please use screen saver.
